

How To Use

Rust Stain Remover (RSR-2000)

1. Identify the stain type.
2. Perform a test by applying a small amount of RSR-2000. If it is a rust stain the RSR-2000 gel will chemically react with the rust stain causing the gel to turn purple in color.
3. Remove the purple residue with paper towel then compare your result to the original rust stain. If the results obtained are acceptable, then perform removal over the entire stained area.
4. Tape around the area that you want to remove the rust stain.
5. Apply a coat of 1/8" to 1/4" thick of RSR-2000 over the rust stained area.
6. Let the RSR-2000 to react with the rust stain for about 10 minutes.
7. Remove the purple residue with paper towel.
8. Clean the treated area with water.
