

Curve Cutting Just Became Easier!

Contour Blades

The Alpha® Contour Blades are specifically designed for cutting sinkholes and other curve cutting applications on granite and harder types of natural stone. The special design incorporates diamonds segments on both sides of the steel core, as well as, on the peripheral cutting edge. This allows the blade to cut the curved area cleanly, accurately and safely while allowing a wider kerf, thus giving the blade easier cutting ability. The diamond segment on the inside of the steel core prevents undercutting, which is a common problem with curve cutting applications. The Alpha® Contour blade can be used either wet or dry. It is versatile and fits on most common angle grinders and is the best choice for any curve cutting application.

PART NO.	SIZE	MAX RPM	ARBOR	DEPTH OF CUT
CCB004	4"	14,500	20mm, 5/8"	3/4"
CCB045	4-1/2"	13,200	7/8"	3/4"
CCB005	5"	12,200	7/8"	1-1/4"
CCB006	6"	10,100	7/8"	1-5/8"

The only curved cutting blade with directly sintered segments and diamonds on both sides of the steel core
