TUCK POINTING

**A Virtually
Dust-free
Solution!**

Alpha® has expanded its Ecoguard line for cutting applications to include a dust collection cover for wider blades. Introducing the Ecoguard Type W5. Unlike the Ecoguard Type C which uses a supplied dust collection bag, the Ecoguard Type W5 must be used with a vacuum, or other dust collection system, to successfully collect the dust and larger particles derived from using wider kerf diamond blades such as the Alpha® Tuck Pointing or Crack Chasing blades. The Ecoguard Type W5 includes three unique features. First is the ability to easily adjust the cutting depth by using a simple wing nut operation. The second is the nose guide that indicates the cut line and the third is the ability to view inside the cover, while cutting, due to the clear polycarbonate material construction. This feature is quite useful during Tuck Pointing applications. Additional connectors have been added to accommodate even more grinders.

USING THE ECOGUARD TYPE W5 WITH THE HSG-125

The HSG-125 has two flange/lock nut sets included that allow the use of 4", 4-1/2" and 5" diameter blades. It can also be used on other manufacturers' machines by simply changing the connector.

PART NO.	SIZE	DESCRIPTION
ECOGRDW5	5"	Ecoguard Dust Collection Cover Type W5
500026	18"	Flexible Connector Hose (1-1/2" Tapered-2-1/4")
ECOW5KIT	5"	Ecoguard W & Connector Hose Kit
